

HYDRAGUARD LIMITED

SCL

SCL is a powdered alkali used for pH correction of effluent after acid cleaning.

CONTROL

The pH of any effluent stream should be adjusted to within the necessary consent levels (typically pH 6-10)

APPLICATION

SCL should be added gradually to the effluent with mixing until the desired pH is achieved.

Neutralisation should be carried out in a separate tank and not in the system which has been acid cleaned since this may result in precipitation of the dissolved scale.

SCL can, however, be used to remove residual acidity after a system has been drained.

HANDLING AND STORAGE

Irritating to eyes. May cause slight irritation to skin. Avoid breathing dust. Wear gloves and goggles when handling.

PACKAGING

SCL is available in 25 kilo containers.
